Catalog of Classic Round Engine Models.

For the nostalgia buff— Here are great plans to build the radial engine "golden age" planes of the 30's and 40's! Scale: 1 in.=1 ft. Ideal for display, R/C or electric!

Full-size plans are drawn on three large 24" x 36" ("D" size) sheets. The twins and the Vultee have 36" x 48" ("E" size) sheets. All models feature sheet balsa skin construction over balsa or plywood formers and ribs, Engine sizes range from .049 to .092 cid. All patterns and templates are full model size. Exceptionally clear plans with easy to follow instructions and exploded perspectives show details of assembly. List of materials is included. These catalog sheets are a montage of reduced segments of the drawing showing the extent of detail and ease of construction, along with a brief word about the aircraft.

The plans are compiled from catalogs, 3 views, photos, factory information, operating manuals and published drawings by Paul Matt, W. E. Wylan and others.
